PolyXeta®2

Sensor with infrared sensor head, zone 1, PX2-1-IR Sensor with infrared sensor head, zone 2, PX2-2-IR

Microprocessor based gas sensor with 4 – 20 mA / RS485-Modbus output signal, alarm and fault relays for monitoring the ambient air to detect different gases and vapours within the lower explosive limit (LEL) by means of a high-quality infrared sensor element. The IR measuring principle with integrated temperature compensation ensures highest accuracy, selectivity and reliability. The sensor head is gold-plated inside and therefore offers best performance characteristics in terms of drift, stability and reproducibility. The calibration of sensors without LCD display is carried out via the calibration device STL06-PGX2 or the PC software PCE06-PGX2. Sensors with LCD display have an integrated calibration routine that is started from the outside by a permanent magnet without opening the housing. In case of an alarm or a fault, the backlight of the sensors with LCD display changes from green to red.

APPLICATION

The PolyXeta[®]2 IR sensor is used in industrial areas like oil/gas industry, biogas plants, petrochemical industry, power plants etc. in Ex-Zone 1 or 2. The PolyXeta[®]2 sensor is also suitable for commercial areas like gas transfer stations etc. With the 4 – 20 mA / RS485-ModBus output signal the sensor is suitable for connection to the PolyGard[®]2 gas controller series by MSR-Electronic, as well as to any other controllers or automation devices. Optionally, the PolyXeta[®]2 sensor is also available with LCD display and relay output.
